

Career History

Heungchul Kim 김형철

SUMMARY

Project	Core Competency	Key Results
Brand flagship model launch	Go-to-Market Strategy	Pre-orders hit 100% of target; premium brand image +2.9p (19.5 → 22.4)
Premium customer loyalty program	Customer Segmentation & CRM Strategy	VIP-care image +3.0p (12.8 → 15.8), overtook Audi in the category
Brand app integration PM	Digital Channel PM	Online service booking 0 → 20%; ~90% new-car owner sign-up; ~90k members
Integrated brand consulting for an independent café	Brand Consulting	Store expansion across Seoul's major retail districts; 10k Instagram followers

01 Brand Flagship Model Launch

2024

Background & Problem

- As-IsA new customer persona with purchase motivations different from existing lineup owners; dealers had no experience selling to this persona
- To-BeRaise awareness of the flagship model and contribute to sales
- GapPersona definition and a dealer sales-message standard

Approach

- Dual KPIs:** Set pre-order volume and premium image metrics together, benchmarked against competing premium brands' prior-year figures
- Persona redefinition:** Defined the target as luxury-lifestyle consumers instead of relying on purchase history
- Two-phase launch:** Ran a June pre-launch to secure pre-orders and read market response, then locked the July official-launch messaging on that basis
- Journey integration:** Designed awareness through advertising, contact through experience programs, and conversion through dealers
- Dealer standardization:** Standardized sales messaging with model sales kits, matched to online content

Target & Action Plan

- Target: hit the 5-month pre-order goal; premium brand image 19.5 → 22.2 (2024)
- Integrated design of the launch plan, advertising strategy and customer experience programs
- Ran pre-launch and official launch as two phases
- Produced and distributed model sales kits and model content for online channels and dealers
- Established the two-phase launch process with related teams

Results & Follow-through

- Hit 100% of the 5-month pre-order goal; premium brand image 22.4 (target 22.2)
- Applied the two-phase launch process to subsequent model launches; sales kits became the standard format

Background & Problem

As-Is	The global loyalty program did not match Korean owners' expectations; VIP-care image at 12.8, behind competing premium brands
To-Be	Owner perception that the premium experience continues after purchase
Gap	No tiers or benefits designed around Korean owners

Approach

1. **Owner segmentation:** Classified owners by three criteria — purchase model, purchase timing, relationship status
2. **Owner-only three-tier structure:** Three tiers — first flagship delivery, any-model delivery, and repurchase with continued service visits; no entry tier for non-owners
3. **Experiential benefits:** Built benefits as lifestyle experience programs instead of price discounts, preserving premium positioning
4. **App-only operation:** Limited tier status checks and benefit use to the brand app, driving app sign-ups and building owner data
5. **Flagship-first rollout:** Proposed a Korea-specific design to HQ and won approval; applied to flagship owners first, using response data to time the all-model expansion

Target & Action Plan

- Target: VIP-care image 12.8 → 14.6 (2024); validate with flagship owners, then expand to all models
- Tier redesign based on purchase and service data
- Design and operation of tier-specific lifestyle programs
- Content production; system and dealer readiness

Results & Follow-through

- VIP-care image 15.8 (exceeded 14.6 target); overtook Audi in the category (internal brand tracking survey)
- Expanded the tier and benefit structure validated with flagship owners to owners of all models

03 Brand App Integration PM

Background & Problem

As-Is	Owner data scattered across dealers; service touchpoints including maintenance booking 100% offline
To-Be	A 1:1 connection between brand and owner; post-purchase service moved online
Gap	Data integration and service digitization

Approach

1. **Sign-up at delivery:** Built app sign-up into the vehicle delivery process, then made the app the only place to check loyalty tiers — strengthening the reason to join
2. **Maintenance booking first:** Formed app-usage habits at the highest-frequency touchpoint, accumulating service-visit history as customer data
3. **Two fixed KPIs:** New-car owner registration rate and online booking share; feature development ordered by KPI contribution, not by request order
4. **Mileage integration:** Points earned at five touchpoints — new sign-up, referral, repurchase, service visit, online shopping
5. **Phased integration:** Brought dealer data together step by step, working with the product organization and dealers

Target & Action Plan

- Target: 90% new-car owner app sign-up; 20% online booking share
- Integrated dealer-held owner data into the brand app
- Moved service touchpoints online, starting with maintenance booking
- Integrated the loyalty program and mileage into the app
- App redesign

Results & Follow-through

- Online booking share 20%; ~90% new-car owner app sign-up (as of 2025); ~90k total members; 15k–20k MAU
- Expanded the unified app into the common platform for subsequent loyalty and service programs

Background & Problem

- As-Is** During COVID: proven products but no way to reach customers, and survival at stake
- To-Be** A brand recognized as an experience beyond taste, with stable operations and expansion built on that recognition
- Gap** No channel to reach customers, no structure to expand

Approach

1. **Designed for a small brand:** No ad budget, no marketing staff, one to two hours a day — chose only methods sustainable under those conditions
2. **Exposure through external collaborations:** Proposed and landed TV appearances, department-store pop-ups and similar opportunities instead of paid advertising; that visibility triggered the store expansion
3. **Production efficiency:** Unified logo, packaging and store tone first, then expanded sales locations from a single production base

Target & Action Plan

- Target: no quantitative goal — stable operations and expansion, starting from survival through COVID
- Redesigned logo, packaging and store tone
- Proposed and ran external collaborations such as TV appearances and department-store pop-ups
- Established Instagram content tone and operating principles

Results & Follow-through

- Participated in store expansion across Seoul's major retail districts through brand, collaboration and operations design; 10k Instagram followers
- Kept one brand standard — no store-specific menus or promotions — so the experience stays consistent as stores grow
