

PROFILE

Nine years at Toyota Motor Korea. Owned both customer relationships and product lifecycle across the Toyota and Lexus brands. Turned service-touchpoint data into segmentation, tiering and loyalty structures to optimize CLV, and owned products from launch through growth and retention. Two flagship projects: localized Lexus's global loyalty program Encore into 'Lexus Amazing Members,' and led an after-sales DX that unified fragmented dealer data into the brand app — digitizing 100% of the service process and reaching ~90% new-car owner app sign-up (2025), ~90k members and 15k–20k MAU.

EXPERTISE & PROJECTS

Toyota Motor Korea · Brand & Marketing PM · 2017–Present · Seoul

• CRM & Customer Loyalty Turning customer relationships into data assets

2024–2025

Brand Loyalty Program — Lexus Amazing Members

Won HQ approval for a Korea-specific experience program — judging the global Encore as-is would miss Korean owners' expectations. Segmented owners by purchase model, timing and relationship status into an owner-only three-tier structure, with lifestyle experiences as benefits instead of discounts. Limited tier access and benefit use to the brand app to drive sign-ups and accumulate owner data. Applied to flagship owners first, expanding to all models on response data. VIP-care brand image 12.8 → 15.8 (+3.0p, exceeded 14.6 target, overtook Audi in category — internal brand tracking survey).

• Customer Engagement Service-touchpoint data into marketing assets

2017–2019

Customer Brand Journey Service

Built a system linking service-touchpoint data — from maintenance and consultation — to marketing strategy. Responded by age-based segment, laying the groundwork for later data-driven decisions.

• Digital Transformation Unifying offline into a digital 1:1 channel

2021–2026

Customer After-Sales DX

Unified owner data scattered across dealers into a single brand app and moved service touchpoints online, starting with maintenance booking that had been 100% offline. Built app sign-up into vehicle delivery and prioritized features by two KPIs — new-car owner registration rate and online booking share. Reached 20% online booking, ~90% new-car owner app sign-up (2025), ~90k members and 15k–20k MAU. The unified app became the common platform for loyalty, mileage and service programs.

• Brand Strategy Designing long-term direction & market entry

2025–Present

Brand Mid/Long-Term Strategy (Electrified) In progress

Engaged in electrification from the 2021 EV CFT through the current TFT as a core member. Designed phased market-entry scenarios and infrastructure strategy, and established a brand roadmap differentiated from competitors.

• Product Ownership & Lifecycle Owning products from launch through growth & retention

2019–2026 Q1

Core Product Launch & Lifecycle — Lexus RX · LM

Led flagship launches with dealer sales organizations, targeting a new customer persona distinct from existing lineup owners. Defined the persona by luxury-lifestyle criteria rather than purchase history, and set dual KPIs — pre-orders and premium brand image — benchmarked against competing premium brands' prior-year figures. Ran pre-launch and official launch as two phases, locking messaging on market response. RX pre-orders 131% of plan; LM hit 100% of the 5-month pre-order target; premium brand image 19.5 → 22.4.

BRAND CONSULTING

Raison D'être

2020–Present

Patisserie · Independent Consultant · Personal project

During COVID, proposed and executed integrated consulting across brand, CX, SNS and operations for an independent patisserie with proven products but no way to reach customers. With no ad budget or dedicated staff, secured exposure through external collaborations — TV appearances and department-store pop-ups — and unified logo, packaging and store tone before expanding sales locations from a single production base. Participated in the expansion from one store to three across key Seoul districts; grew Instagram to 10k followers.
